

Homework 3

February 12 - 19

Reading

Feel free to just casually skim/read the following—no need to take notes unless you want to. The readings are meant to complement what we've done so far and should be interesting and enjoyable more than anything.

1. Read The Bitter Lesson by Rich Sutton.

2. **Probabilistic Machine Learning:** Sections 8.4.1 and 8.4.2 on SGD. The rest of 8.4 is pretty advanced but there looks to be some cool stuff in there—feel free to look around and skim anything that looks interesting.

3. **CS229 Notes:** Read Chapter 8, the introduction and 8.1 (no need to read 8.1.1, unless you're interested). This talks a bit more in depth about generalization and the bias-variance tradeoff, which we read a bit about in R+G 1.5.
